INCIDENT FACTS

Incident Start Date: 7/13/2021		**Incident Start Time:** 5:15 p.m.
Incident Type: Vegetation		**Cause:** Under Investigation
Incident Location: Feather River Canyon near Cresta Powerhouse		
Size: 190,625 acres	**Containment:** 21%	**Expected Full Containment:** Unknown
Civilian Injuries/Fatalities: 0		**Firefighter Injuries/Fatalities:** 0
Structures Threatened: 10,721	**Structures Destroyed:** 16 **Other Minor Structures:** 6	**Structures Damaged:** 1

CURRENT SITUATION

Incident Update

Dixie Fire West Zone – The Dixie Fire remained active overnight, with uphill runs, shortrange spotting and rollout. Critically low fuel moistures and record-setting Energy Release Components (ERC) have caused difficulty in suppressing the fire spread. The fire continues to burn in a remote area with limited access, and extended travel times with steep terrain are hampering control efforts. A second incident base, in Westwood, has been established to support logistical needs of the fire. The Dixie Fire remains in Unified Command, with two teams overseeing the fire: CAL FIRE Incident Management Team 1 on the West Zone and California Interagency Incident Command Team 2 on the East Zone.

Dixie Fire East Zone – The East Zone of the Dixie fire was impacted by extreme fire behavior yesterday. The fire burned into the Greenville Wye and burned across both Highway 70 and Highway 89. Firefighters engaged immediately in structure protection in nearby communities. The communities of Paxton and Indian Falls were the most severely impacted. Several strike teams of engines were in the area fighting to protect structures as the fire intensified. They remained in the area overnight as the fire remained active. The Fly Fire and the Dixie Fire have burned together. The Fly Fire has run to the top of Mt. Hough and is now expected to back down the mountain to the northeast. Preparations made to the communications infrastructure on the mountain top were successful in preventing fire damage. Firefighters are preparing fire line southwest of Taylorsville to protect the community as the fire advances. They are also working on dozer line across the top of the fire. Extreme fire behavior is expected again today. Atmospheric conditions are less stable and large pyro cumulus clouds are expected to develop over the fire increasing the potential for spot fires and rapid fire growth. As conditions become safer a damage assessment team will survey the area to determine the extent of structure damage.
